

User Documentation

Team: SC Events

Team Members : Steven Yeng, Alan Woo, Benson Liu, Navjot Singh, Aravind Sambamoorthy

Date: 12/14/14

Main features

- Added custom backgrounds and Images
- Added weather widget
- Added custom 'submit/add/back' buttons
- Events are featured on page in boxes that contain links to send you to details of the event
- Custom navigation bar with logo
- Ability to see details of events
- Ability to edit comments in place using JavaScript and JSON
- Ability to comment on said events
- Integrated web2pys popup calendar when selecting dates
- Only approved posts are displayed on the main page

Test Cases

- Ability to add an event (found in the navigation bar at the top)
 - Includes error checking
- Add a comment
 - Reply to comment of comments etc. (creates a reddit like chain of comments)
- Edit an event
- Approve an event to be displayed on the main page (instruction below)

Known Bugs (in main features)

Some images don't load properly if the application name is not "scevents"

Extra Info

Events that have not been approved by the moderators will not be shown on the site, so if you create an event, make sure to go into the database and check the approve box afterwards so it shows up.

1. Go to database administration (or if you're looking at the index page, change the end of the url to '/appadmin' instead of '/index')
2. View the db.post database
3. Click on one of the post.id numbers to select the post that you want to approve
4. Click the post approved check box and click save (otherwise you have the ability to delete the post by checking the appropriate box)
5. Go back to the main application default index page to view the post

Test Data

Please see included sample events already available in the database.
